i-Page™

Multitone i-Page

Discreetly message your staff for improved performance

Noise free communication

i-Page is a compact wireless, cost effective, messaging system designed to assist organisations communicate with all onsite staff, quickly and with discretion.

By using i-Page your management teams can send an instant instruction to groups of staff, or send a specific instruction to an individual staff member. Examples being, contacting porters in a hotel to assist with customer baggage, or a cleaner needed to clear up a spillage in a public area in a supermarket. Activities essential to maintaining the professional image of your organisation can be organised without disruption to other members of staff or customers within your premises. All requests for action are sent from a computer screen, and are received by the required staff to view and action.

Generating instant messages via a simple to use messaging screen enables you to send clear instructions to staff without using a phone. Visitors to your organisation no longer hear your front of house staff arranging the day-to-day running requirements of the premises, activity just seems to quietly happen without disruption.

Confidence your instruction has been received

You need to know all requests for assistance have been received. i-Page radio paging technology, delivers messages instantly, using a robust and resilient radio communication method. Indeed this technology is the option chosen by the Emergency Services today. With i-Page there is a record of all messages sent, and to whom, so you have an automatic audit trail of requests which can be viewed at a later date if needed.

Your i-Page system is specific to you and your premises. It uses your own private network so you are not dependent upon a third party for the external running of your system. You remain in control of your network.

Controlling costs with i-Page

Unlike many other communication devices, the costs to your business do not escalate with increased usage of i-Page. After the initial purchase of the system you can transmit as many messages as you need without incurring extra costs. All of the expense is contained in the initial outlay of equipment, there are no day to day running costs or tariffs to be budgeted for.

i-Page - monitoring systems when you can't be there

In addition to communicating with people, i-Page links into your existing fires alarms or property management systems. It can be utilised as a fault monitoring device or security device so you are alerted if equipment, such as freezers are not functioning as expected or doors to secure areas are opened outside normal operating hours.

If access to your premises is needed 24/7 but your reception cannot be manned 24 / 7 i-Page can notify your night staff if visitors or deliveries have arrived, by simply sending them an alert linked to a door alarm or pressure mat. Without any disruptive noise, your staff know where they need to be, even if you are not there to advise.

The uses for i-Page are varied and it can be configured to match your specific requirements.

As an example, the freezers in a restaurant kitchen need to work within a range of temperatures to keep food at its optimum. Should any freezer go above these pre-defined limits i-Page would alert your duty manager, enabling them to take preventative action and secure the integrity of the contents. This simple usage of i-Page could save your business the cost of replacing the contents of the freezer.

i-Page - making technology simple

The i-Page system consists of a small central transcoder with antenna; which sits neatly at your office or communications room, a specified number of pagers and software.

Messages are controlled and organised from any networked computer and are sent to small paging units carried by staff. Using i-Page couldn't be simpler, the computer screen, the visual interface between the transcoder and the pagers, is designed to be as simple as possible to ensure that staff become familiar with it and can use it quickly.

The installation of this communication system is very simple and can be completed in under an hour with very little disruption to the running of your premises.

i-Page key benefits

- **Discreet messaging to staff** - all functional tasks for staff can be co-ordinated without disruption to other staff or visitors
- **Removes any lengthy phone conversations**
- **Single-sourced messaging** – messages to teams of staff can be sent instantaneously, ensuring smooth co-ordination of group staff activities
- **Private network** – no obligation to third parties, you control your network
- **Cost containment** – no on-going running costs, or tariffs, irrespective of the amount of usage
- **It can link into your business critical equipment**, such as alarms, refrigeration units, door alarms and alert you if they are not working within defined parameters
- **Help your staff prioritise their communications**

– i-Page is discreet so if staff are already engaged with customers they can continue their dialogue without both parties being distracted by a ringing or vibrating phone, or broadcast voice announcements

- **i-Page** – messages are succinct, the instruction is not lost in protracted social discussion between staff
- **Simple to install, simple to use**

Working with Multitone

The i-PAGE system can be a stand-alone product or it can be combined with a number of our other products and solutions.

- **Lone Worker systems** – to provide employee protection for those staff who may have to work alone or are on night duty
- **DECT telephone systems** – for your management teams who may wish to have longer dialogue between themselves
- **Alarm and property management systems** – to give you immediate notification if an alarm is ringing
