

MULTITONE NUCLEUS™ FIRE MOBILISATION MODULE

FIRE CONTROL INTEGRATION, MOBILISATION AND RESPONSE.

Modernise your Fire Service mobilisation whilst maintaining compatibility with existing Fire Control systems.

The **Multitone Nucleus™** Fire Mobilisation Module extends the Nucleus platform to support Fire & Rescue operational mobilisation workflows through integration with existing Fire Control Centre systems using the established GD92 network. Operational personnel receive mobilisation messages directly within Nucleus, manage their availability, and mobilisation status - delivery, read, acceptance and availability - is returned automatically to Fire Control.

The Fire Mobilisation Module enables organisations to improve responder visibility, increase operational awareness and enhance mobilisation accountability, without requiring wholesale replacement of existing Fire Control infrastructure.

KEY FEATURES

Everything a mobilisation needs, from Fire Control to first response.

GD92 Fire Control integration:

Connects directly into existing Fire Control systems via the established GD92 network and CCP MQTT connectivity.

User, role & team routing:

Route mobilisation messages by individual, role or team to reach the right people every time.

Firefighter mobilisation messaging:

Mobilisation delivered straight to mobile devices through the Nucleus applications firefighters already use.

Full audit logging:

Every mobilisation, response and status change logged for complete accountability.

Call sign & availability management:

Manage firefighter call signs and operational availability status in real time.

Delivery, read & acceptance confirms:

Automatic, real-time status returned to Fire Control at every stage.

WHAT MAKES IT DIFFERENT?

Integrated with Multitone Nucleus™

Real-time Responder Visibility

No Separate Platform Required

Existing GD92 Compatability

Cloud-first Architecture

Full Audit Trail of Mobilisation Activity

ONE DASHBOARD. COMPLETE MOBILISATION VISIBILITY.

By Role at a Glance:

Fire Control

- Real-time responder visibility
- Automatic status updates
- Improved operational awareness
- Better mobilisation accountability

Operational Personnel

- Mobilisation delivered directly to mobile devices
- Simple acceptance workflow
- Availability management
- Improved communication experience

ICT Teams

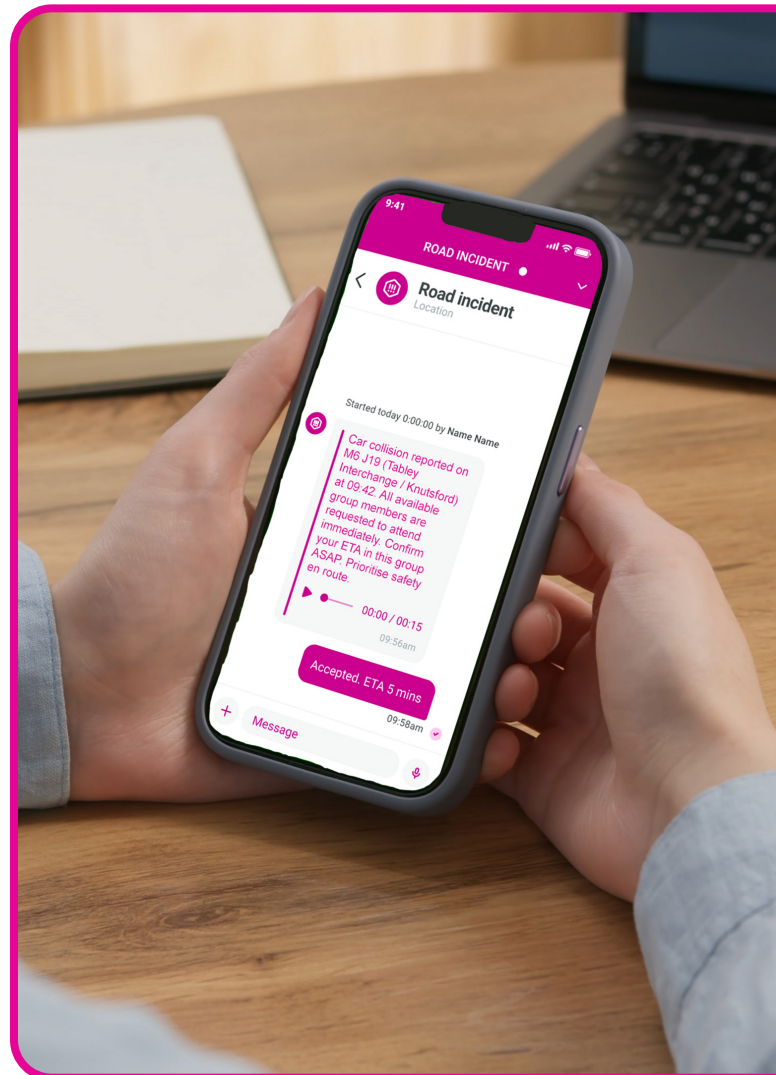

- Cloud-first architecture
- Reduced infrastructure complexity
- Secure deployment model
- Easier scalability

Operational Duty Managers

- Supports digital transformation
- Improves operational resilience
- Protects existing investments
- Provides future growth opportunities

Incident Management is Built for:

- UK Fire & Rescue Services
- Republic of Ireland Fire Services
- Existing Multitone Fire customers
- Fire Services currently using GD92-based mobilisation environments
